

Energy Surveys

The first step in reducing your energy consumption

What to expect from an Energy Surveys?

We provide a two-stage service to help you identify, and then implement opportunities for energy efficiency - so you can *save money* and *reduce emissions* of carbon dioxide:

1. **Opportunities Assessment** - a site visit which looks at overall energy use and identifies opportunities for cost-effective energy savings. This visit and its duration will depend on the size of the organisation's energy bill

Multi-site Opportunities Assessment -

organisations with more than 5 sites should get an opportunities assessment at a sample of sites, to identify the strengths and weaknesses of energy management practices and help the organisation deliver savings across its portfolio of operations

2. **Detailed Survey** - This visit looks at specific issues identified in the Initial Opportunities Assessment. It investigates the feasibility and potential savings from a specific energy saving opportunity.

Upon completion of each assessment a report is produced. Recommendations will include an **action plan** which:

- details approximate savings
- estimates the likely payback period on any investment
- lists information to help source suppliers of energy efficient equipment

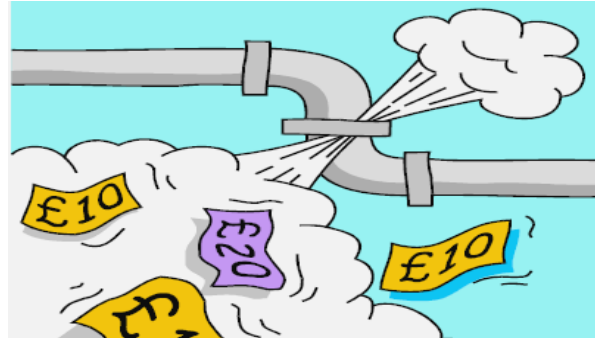

Why ABS consulting?

The ABS team consists of experienced engineers, accredited Carbon Trust consultants and CIBSE certified Low Carbon Consultants and Energy Assessors.

Our philosophy is that buildings exist to fulfil the owner or occupier's business plan and to provide an efficient, safe and comfortable environment for users. It means that we take a client-centred strategic view, informed by our hands-on experience of all phases of the building lifecycle.

Proven Results

In most cases our surveys have identified opportunities for at least a 25% reduction in energy cost and consumption.

Discover where energy is wasted
