

Implementation Support

Move to efficiency and save money

Implementation Support offers professional, independent and objective advice on the development of large, capital intensive (capex) projects to the point where they can be implemented.

So you can get the best value from your investments we help you with:

- Feasibility studies
- Business case development
- Performance specification
- Supplier identification
- Procurement documentation
- Technical bid assessment

How does Implementation Support work?

Client and consultant work together to identify potential energy saving projects that suit the client's business plan.

Consultants produce a written report detailing areas for environmental and energy efficiency improvement as well as potential economic benefits.

Why ABS?

ABS employs experienced engineers and accredited Carbon Trust and Low Carbon consultants. We have provided implementation support to a number of diverse clients. Typical projects have included the following installations:

- CHP (Combined Heat and Power)
- VSD (Variable Speed Drives)
- HVAC

Our philosophy is that buildings exist to fulfil the owner or occupier's business plan and to provide an efficient, safe and comfortable environment for users. It means that we take a client centred strategic view, informed by our hands-on experience of all phases of the building life-cycle.

Government Funding for Eligible Projects

ABS can help you access government funding to finance parts of your carbon and energy management initiatives. We have introduced many clients to the Carbon Trust Implementation Support programme all of whom have found the subsidized services to be a revealing and rewarding exercise - at no or low cost to themselves.

The installation of a CHP system dramatically reduces energy costs

Next Steps
